
Construction 40: Book VI, Proposition 10

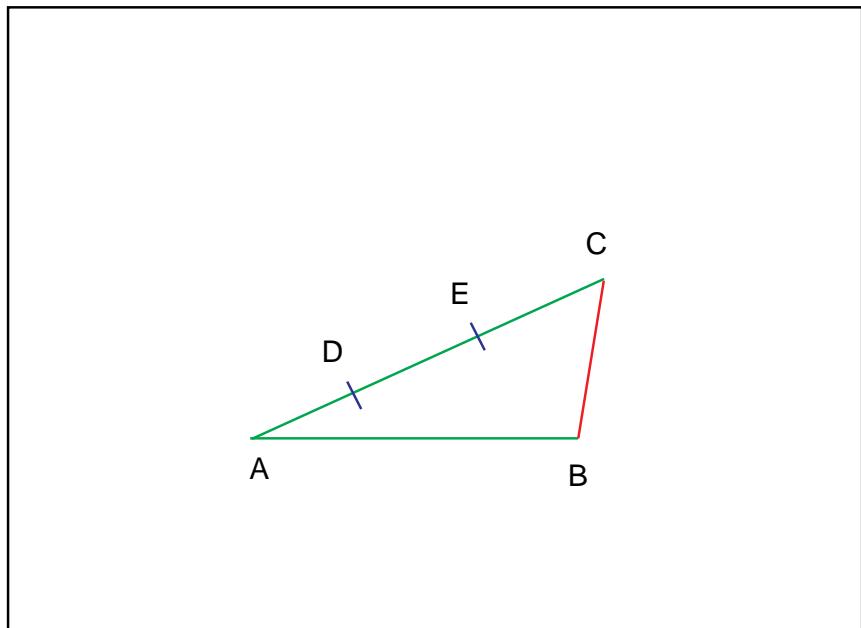

*To cut a given uncut straight line
similarly to a given cut straight
line.*

VI.10:3. Let AB be the given
uncut straight line, and AC the
straight line cut at the points D,
E; and let them be so placed as to
contain any angle;

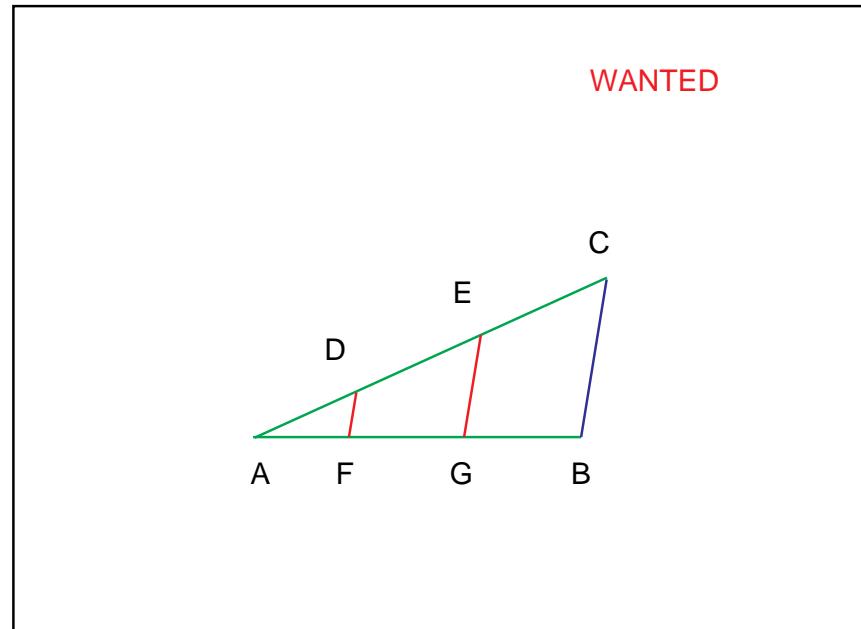

VI.10:7. let CB be joined,

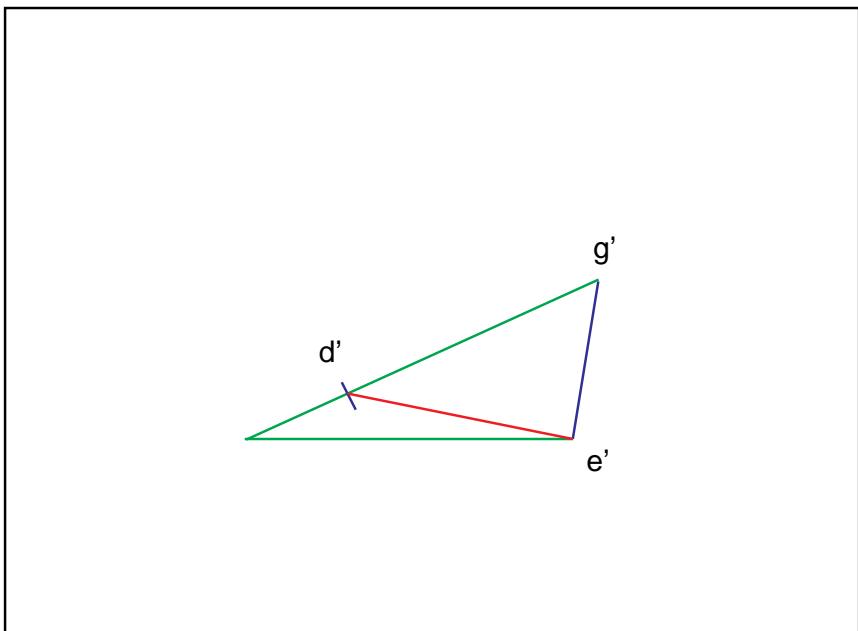

VI.10:7. and through D, E let DF,
EG be drawn parallel to BC,
[I.31]

GOSUB I.31 (C#10) for DF, as in
C#39.

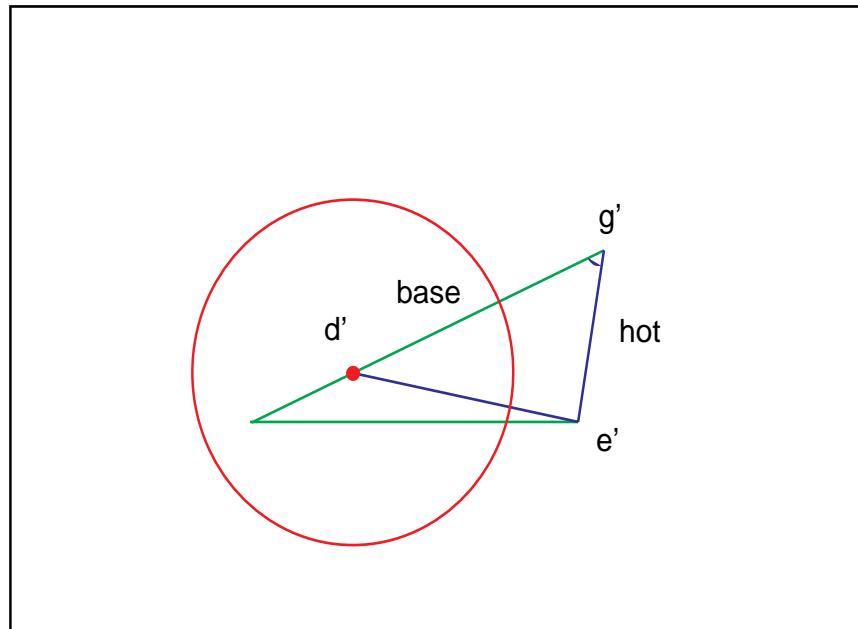

GOSUB I.23, C#9.
Relabel.

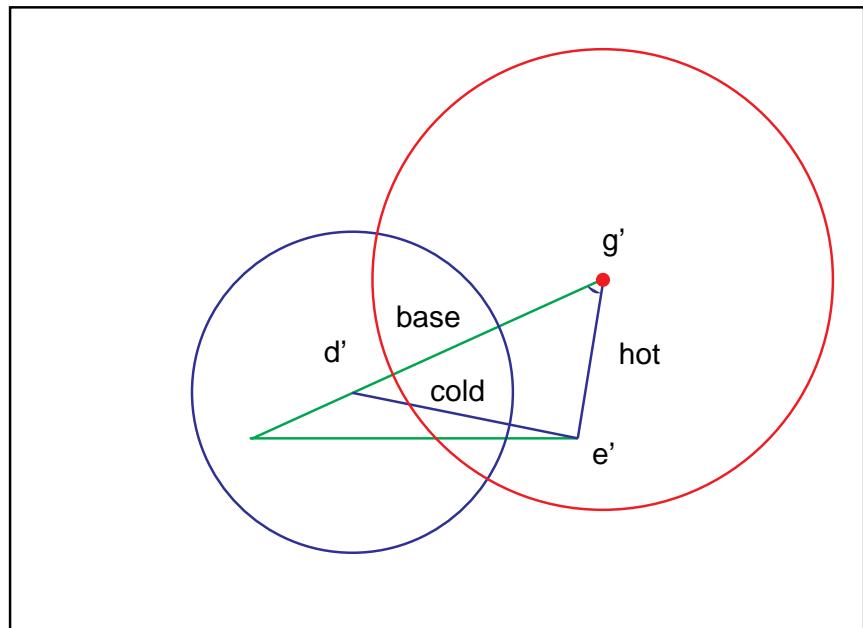

I.23:10. let $d'e'$ be joined.

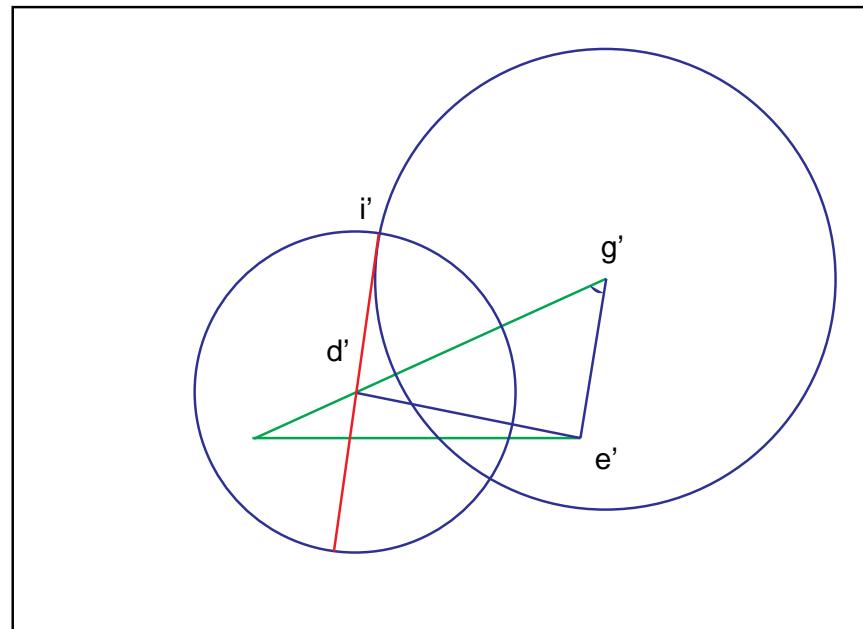

Swing the hot arm around d' .

Swing the cold arm around g' .

Connect the upper crossing to d' and extend.

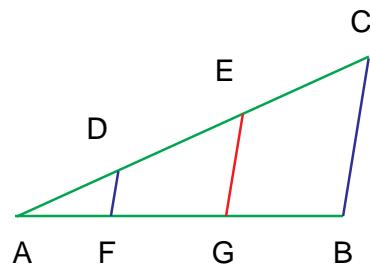

Cleanup.
RETURN to VI.10:7.

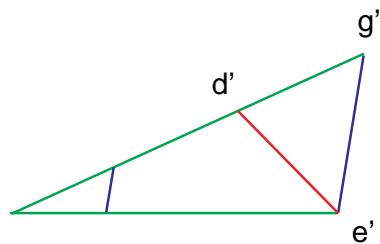

GOSUB I.31 (C#10) for EG.

GOSUB I.23 (C#9).
Relabel.

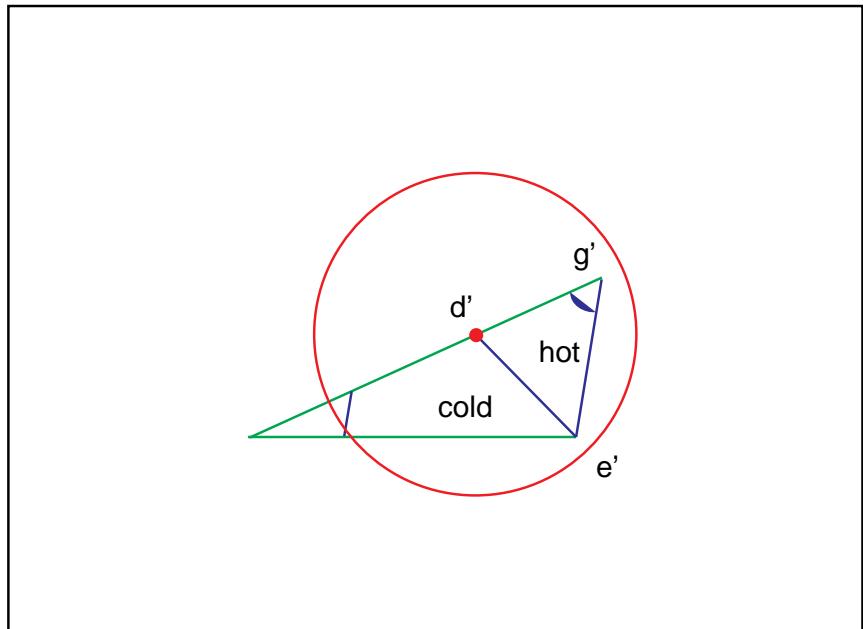

WANTED

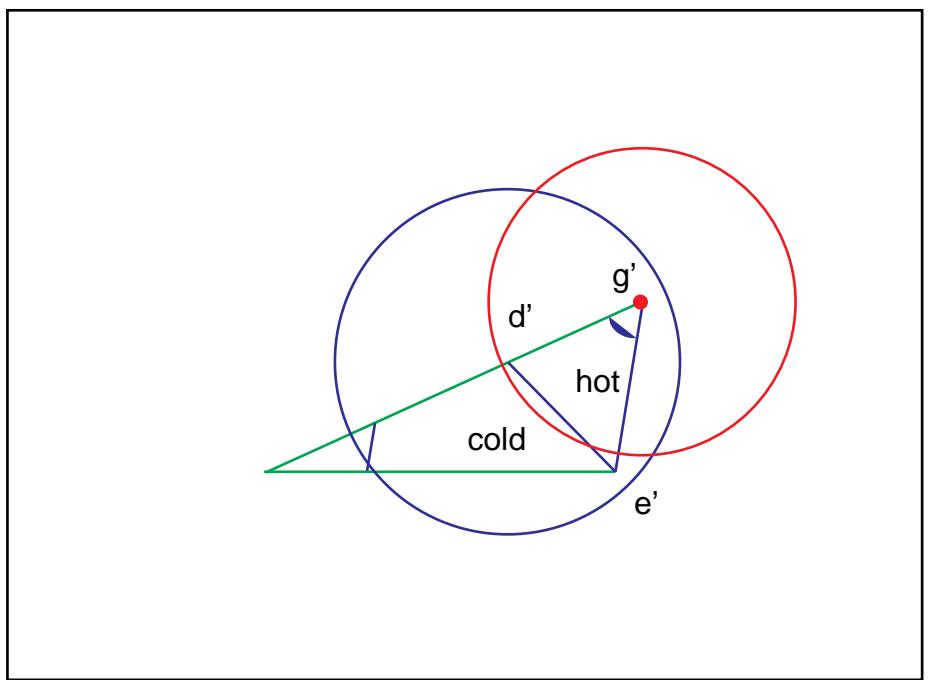

I.23:10. Let d'e' be joined.

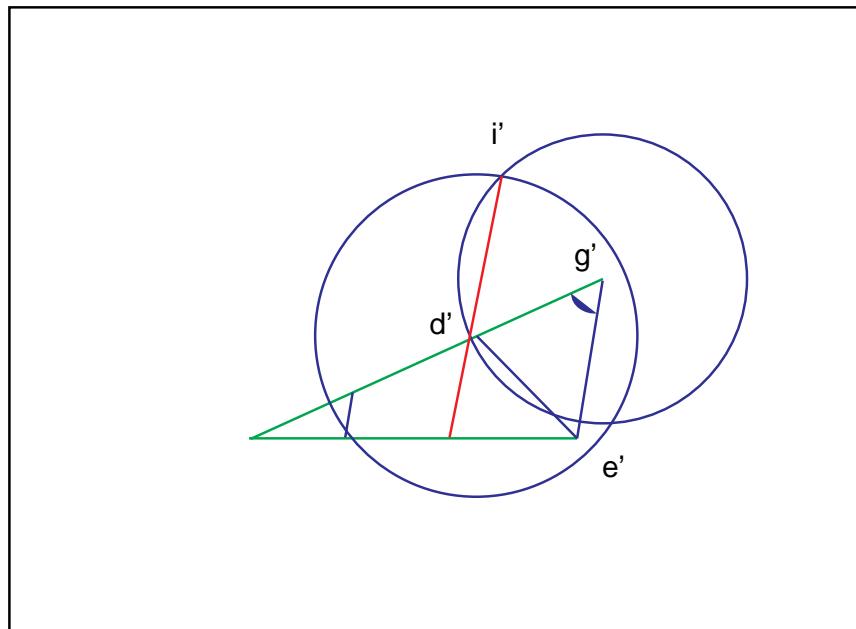

Swing the hot arm around d' .

Swing the cold arm around g' .

Connect the upper crossing i' to d' and draw through.

Cleanup. Relabel.
RETURN to VI.10:7.

VI:10:28.. Therefore the given uncut straight line AB has been cut similarly to the given cut straight line AC.
